

SCRIPT GUIDEBOOK

INTRODUCTION

Included in this addon are many scripts and objects designed to help you and your friends interact with the mechanics of the board game. These tools were made to help soothe the mental load of all the varying inputs and calculations, and to speed up processes that normally consume too much time in order to make the process of playing more enjoyable. Scripts cannot be turned off, and are highly recommended for the best gameplay experience, though you are not forced to utilize them if you so choose as many interactions and mechanics can still be resolved manually for any particular reason.

The script utilizes the name, tooltips, snap point positions and the internal IDs of many objects and elements on the board in order to verify, check and resolve key functions. This is required to have several mechanics work as intended. Any alterations to these properties can and will lead to the script becoming inoperable. Due to how these assets are linked together and intertwined, it is also impractical to take any scripted object into other saves or versions, and doing so can lead to errors and unintended behaviours.

GM TOOLS

The table possesses many new tools and scripts that can assist with the several tasks that the GM must handle as the game progresses. In this section, you will find summaries of each of the tools at your disposal.

ON THE TOP-RIGHT SPACE OF THE GM TABLE, YOU WILL FIND 3 GREEN PANELS

PHASE ANNOUNCEMENTS

The leftmost panel is the 'Phase Announcement' Panel, its purpose is mainly for, as its name implies, Phase Announcements. Clicking each name outputs a message to all Managers, to help keep track of which Phase is currently active. It does not interact with any other script on the table aside from Tiphereth's Core Suppression Reward, which changes the 'Bullet Acquisition Phase' to advise focusing 2 Bullets per Manager instead of 1.

ASSISTED LOB INCOME

The rightmost panel is the 'LOB Income' Panel, which allows the GM to set a specific amount of LOB to dispense to all Players' LOB Counters when pressed. This will most commonly be used in the LOB Phase, to give the appropriate amount of LOB to all players. Use both the rulebook, and the guidelines present on each table, to learn what value to set for LOB Income at each stage of the game.

SCRIPTED SUPPRESSION REWARDS

The middle Panel, 'Scripted Suppression Rewards', allows to GM to mark each Core Suppression the players have completed throughout the game by clicking on the checkbox beside each name. This step is very important, since the Panel controls many values and variables connected to the script of other assets on the table. In addition to making these Departments immune to Qliphoth Meltdowns when resolving other GM tools, here is the list and details of each Suppression Reward linked to a script within the game:

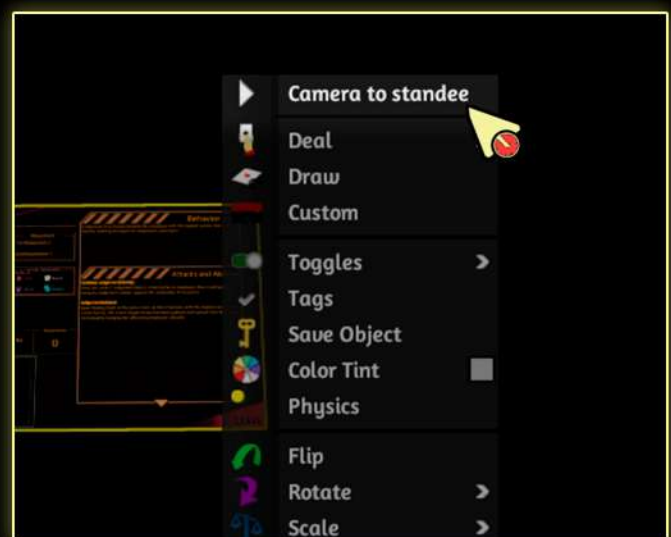

- ✔ **MALKUTH:** Automatically increases the 'LOB Income' by one (See page 3: LOB Income Panel)
- ✔ **YESOD:** Turns the cost of all Defensive Statistics to zero (See page 14: Codex Cards)
- ✔ **HOD:** Upon hiring a new Employee, or respawning one considered to be dead, automatically sets all stats to 11 (See page 9: Employee Cards)
- ✔ **TIPHERETH:** Changes the message when the 'Bullet Acquisition Phase' is announced to advise Managers to focus 2 Bullets each instead of only 1.
- ✔ **GEBURA:** Increases the maximum extraction limit of every EGO Set by one.
- ✔ **HOKMA:** Allows Employee Stats to be increased to a new tier, 'EX'.
- ✔ **BINAH:** When marking an Employee as Dead, does not delete their EGO Equipment, allowing Managers to unequip the Suit and Weapon for use elsewhere.

If any Suppression Reward is revoked (by unticking the box), it will simply revert the above variables back to their default settings.

CONTEXT MENU

DOSSIER AND NON-EMPLOYEE STANDEES

By right-clicking any Dossier or Non-Employee Standee, you will open the Context Menu for it. You can then click on the 'Camera to Dossier' / 'Camera to Standee' button respectively to freely move the camera towards the option you chose. This is useful to locate or quickly move through the table between Dossiers and their Standees when in play.

EMPLOYEE CARDS AND STANDEES

The same can be done to any Employee Card or Employee Standee, alternating between the two. This is helpful to quickly locate a specific Employee when there are many Standees on the table.

You can also note that Employees exclusively have a **unique tooltip** when hovered to help give detail about their Stats, Movement range and EGO Gear. In case of any issues, clicking 'Refresh description' will force the tooltip to update.

CODEx CARD TO CONTAINMENT CELL

The same Context Menu can be encountered for Codex Cards and Containment Cells, allowing you to quickly move your camera between the two, helpful when resolving Work Phases. This functionality, much like for Employee Cards and their Standees, is available to Players and the GM both.

MELTDOWNS

By right-clicking any Containment Cell, you can select a Meltdown from a list to automatically apply its respective decal on the room. You can then repeat the process to change the Meltdown to another type, or remove it by selecting the same option.

Any Meltdown is also removed once an Employee worked with the Containment Cell via the Work Panel (See page 13) or when the Qliphoth Count of the Abnormality undergoing the Meltdown reaches 0.

QLIPHOTH COUNTER

For Containment Cells, after left-clicking on the Qliphoth Counter, you can type in any number to change the Qliphoth Count for that Abnormality (within the range of possible numbers for that Abno). If the room has any different states that correlate to its Qliphoth Count, it will automatically be changed for you, however those with multiple states that do not change based on current Qliphoth Count still require the manual adjustment of states by the GM (Examples: Parasite Tree, Equippable Tools, etc.).

CLICK TO CHANGE

Once any Qliphoth Counter Reaches 0, it will automatically apply a special decal to indicate the dangerous nature of the Abnormalities current state. Different decals are applied if the Abnormality is capable of breaching or not.

Note: Abnormalities like 'THE KNIGHT OF DESPAIR' do not have a Qliphoth Count, however through the Context Menu in its Containment Cell, you can select it to 'Breach' (See 'Meltdown Image' in page x) to apply the same effect.

BREACHING ABNORMALITY (LEFT)
NON-BREACHING ABNORMALITY (RIGHT)

QLIPHOTH COUNT AUTOMATICALLY CHANGING
STATES

GM UTILITIES WINDOW

The Player assigned the role of the Gamemaster/GM (Black Colour) will be able to see a Gear Icon  at the bottom of their screen. Left-clicking it will open the GM Utilities Window; a GM Tool made to help in selecting random possibilities without the use of external software. This screen is only available to the GM, and possess a variety of parameters to help decide random effects, such as announcing and pinging random Employees, Containment Cells, Hallways and Main Rooms throughout the Facility. See below for all of the options and what they can provide in detail:

 **RANDOM EMPLOYEE:** Select a random Employee in the Facility, has options to limit the range by:

- ▼ **ALL:** Select any Employee in the Facility.
- ▼ **HIGHEST STAT:** Only select an Employee with the highest stat chosen. If multiple Employees have the highest stat, it will roll a random one between them.
- ▼ **P1, P2, P3, P4:** Only select an Employee belonging to that Player's Table.
(P1: **MALKUTH**, P2: **YESOD**, P3: **HOD**, P4: **NETZACH**)

CHECKBOXES:

- ☐ **CAMERA TO STANDEE:** Brings the Camera to the Standee instead of the Employee Card.

 **RANDOM ABNORMALITY:** Select a random Containment Cell in the Facility, has options to limit the range by:

- ▼ **ALL:** Select any Containment Cell in the Facility.
- ▼ **LAYER:** Only select from a random Containment Cell in the chosen Layer.
- ▼ **DEPARTMENT:** Only select from a random Containment Cell in the chosen Department.

CHECKBOXES:

- ☐ **IGNORE MELTDOWN IMMUNITY:** Select a random Containment Cell, even if it has Meltdown Immunity. By leaving this option off, it will only select Containment Cells in Departments that don't have their Core Suppression completed. This script utilizes the 'Scripted Suppression Rewards' panel in order to check these ranges. (See page 4: Scripted Suppression Rewards Panel).

Note: You will usually leave this option unticked when resolving 'Qliphoth Meltdown' Event Cards.

- ☐ **IGNORE MELTDOWN STATE:** Select a random Containment Cell, even if it is currently undergoing a Meltdown.

⚙️ **RANDOM MAIN ROOM:** Select a random Main Room in the Facility, has options to limit the range by:

- ▼ **ALL:** Select any Main Room in the Facility. This script does not keep track of the state the game is currently in, so be aware this parameter can even select from Main Rooms that haven't yet been unlocked.
- ▼ **LAYER:** Only select from a random Main Room in the chosen Layer.
Department: Only select from a random Main Room in the chosen Department.

⚙️ **RANDOM HALLWAY:** Select a random Hallway in the Facility, has options to limit the range by:

- ▼ **ALL:** Select any Hallway in the Facility. This script does not keep track of the state the game is currently in, so be aware this parameter can even select from Hallways in Layers that haven't yet been unlocked.
- ▼ **LAYER:** Only select from a random Hallway in the chosen Layer.
- ▼ **DEPARTMENT:** Only select from a random Hallway in the chosen Department.

⚙️ **RANDOM ANY ROOM:** Select a random Main Room, Elevator, Hallway, or any other room type in the Facility. Has options to limit the range by:

- ▼ **ALL:** Select any Room in the Facility. This script does not keep track of the state the game is currently in, so be aware this parameter can even select rooms in Layers that haven't yet been unlocked.
- ▼ **LAYER:** Only select from a random Room in the chosen Layer.
- ▼ **DEPARTMENT:** Only select from a random Room in the chosen Department.

⚙️ **RANDOM DEPARTMENT:** Select a random Department in the Facility. Has options to limit the range by:

- ▼ **ALL:** Select any Department in the Facility. This script does not keep track of the state the game is currently in, so be aware this parameter can even select a Department in a Layer that haven't yet been unlocked.
- ▼ **LAYER:** Only select from a random Department in the chosen Layer.

⚙️ **RANDOM TYPE:** Select a random type of Stat, Work or Damage. This parameter doesn't have different ranges to choose, as it can be used for all of them in one go, resolving as you need.

EMPLOYEE CARDS

Employee Cards are the main panel that players will interact with throughout the campaign. As such, it is very important that players understand how it works and are able to operate it correctly. On each Player's table, they will find these objects: A Buy Station, a LOB Counter, and of course the table itself. See below to understand their purpose:

LOB COUNTER

Displays how many LOB Points the player has. It will automatically be reduced by ANY purchase made through the use of Employee Cards. As mentioned previously, the GM is also able to dispense LOB through all LOB Counters using their 'Assisted LOB Income' Panel, so manual interaction with it is not normally necessary, although any manual increase or decrease will not interfere with any scripts. Manual alterations are NOT announced in chat.

BUY STATION

By left-clicking inside the dotted lines, any Player can buy an Employee Card, which comes linked with their Standee through the Buy Station. This automatically reduces their LOB by 1. This object also serves as a quick guide on how to use the Employee Cards.

Note: Employee Cards can be manually linked to their Standee by manually taking the Standee out of their bag and dropping onto the Employee's frame in the Employee Card.

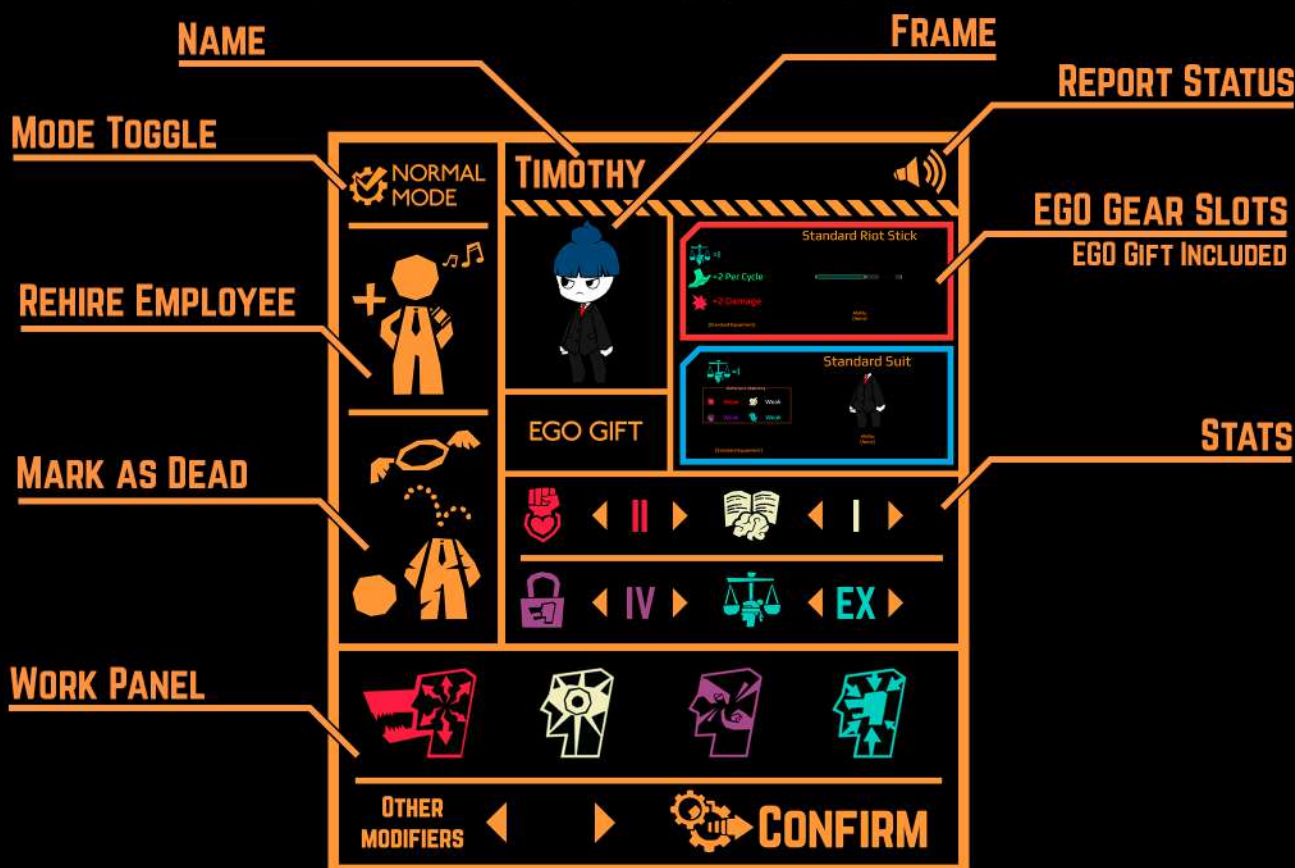

TABLE !!

The Player's table is what links the Employee Cards to their LOB Counter, and colors all interactions in their announcing messages. For that reason, it is important that Players leave their Employee Cards within the limits of their table. Moving the Employee Card onto another Player's table, will link that Card to their LOB Counter instead.

THE EMPLOYEE CARD

Contains all information about each unique Employee, including their Stats, EGO Gear, Work Panel, as well as extra inputs that will help manage your Employees further.

NAME

Employees come with a random name when purchased at the Buy Station. You can however left-click their name in their Employee Card and change it to any name of your choice. The Standee is automatically updated with the new name inputted. Do note, that this does not occur in reverse.

FRAME

Does not serve much use aside from showing the Image of the Employee. However if you are manually taking Employee Cards and Standees out of the bag (without the use of the Buy Station) you will need to drop the Standee on top of the Employee's Frame in order to link it with the corresponding Employee Card.

REPORT STATUS

 Ping and send a message in chat that details the Employee's Stats, current Health, and Sanity.

MODE TOGGLE

By left-clicking the 'Normal Mode' or 'Free Mode' buttons on the Card, it will toggle the Employee Card between those two states.

 **NORMAL MODE:** While on this mode, it will automatically reduce the LOB by the correct cost each time you either re-hire or alter the Stats of this Employee. This mode will also block any purchase that cannot follow through due to insufficient LOB. Recommended to be left as the default in most cases.

 **FREE MODE:** While in this mode, the player can freely alter any Stat and rehire this Employee without any cost. This mode will not reduce any LOB, and also has special integrations explained further below. This mode is recommended to be used only when an Employee receives any Stat increase or decrease due to an external effect outside the LOB Phase that is not integrated within the scripts.

STATS

By left-clicking the arrows beside the Stat numbers, you can decrease (left arrow) or increase (right arrow) any Stat on your Employee Card. Any altering will be automatically announced in chat, together with how much it cost and how much LOB is left.

EGO GEAR

Upon placing any EGO Suit, Weapon or Gift into the respective slots on the Employee Card, it will automatically apply a special decal to the Employee Standee to help indicate what EGO Gear the Employee is wearing (Note: There are no decals for EGO Weapons). If an Employee can't wear an EGO Gear due to its Justice Level, it will send a message in chat to indicate its insufficient level, and will not resolve any effects related to that gear.

Further note: A message is announced in chat every time an Employee equips or unequips any piece of EGO Gear. This is also important to check if the Employee Card script is detecting the EGO Gear object on top of it.

MARK AS DEAD

Upon an Employee inevitable demise, click on 'Mark as Dead' to recall their standee, reset all Stats, and lose any EGO Gear they had. Together with sending a message in chat to announce their departure, this will flag the Employee as 'dead' so it is removed from the range of parameters in the GM Utilities of 'Random Employee', for example.

While in  **FREE MODE**, this option will NOT recall the standee, reset all Stats or destroy EGO Gear on death. This is useful when dealing with EGO Gears like [Everlasting] and [Feather of Honor], which are indestructible or have reviving abilities. Remember, the script does not delete EGO from a dead Employee if Binah's Core Suppression Reward was obtained.

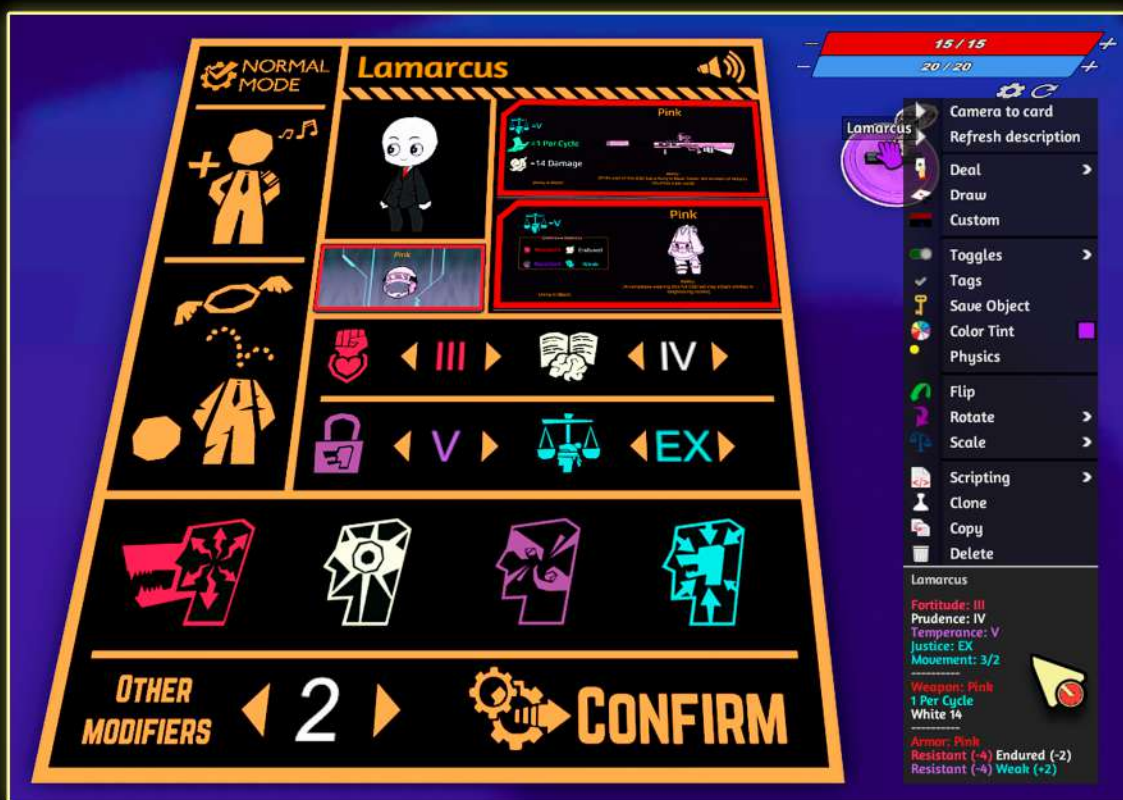

REHIRE EMPLOYEE

Spend 1 LOB, to restore Employee's Health and Sanity to full, and remove the 'dead' flag from the Employee allowing them to interact with the rest of the table again.

EMPLOYEE STANDEE

The Standee automatically updates itself with any alterations made to the Employee Card. Examples include any changes to the Employee's Fortitude or Prudence automatically changing the Health or Sanity on their Standee respectively. This also occurs with any EGO Gear or Tokens that alter the Max Health or Sanity of Employees, with an accompanying message being broadcast for all changes that occur in this way.

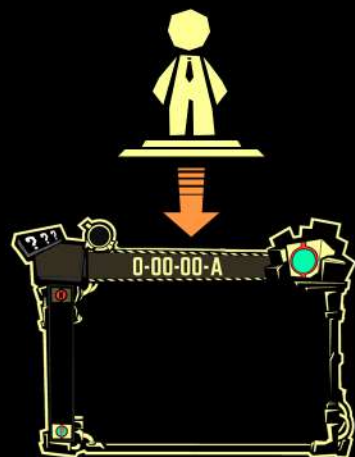

The image above shows an Employee Card and Standee together with varying Stats and EGO Equipment. All of this information is displayed on its Tooltip, which can be refreshed through the Context Menu should it not automatically update on its own (See page 5). The Tooltip also shows any bonus effects from Tokens and most other sources, such as incoming damage reduction.

WORK PANEL

The bottom section of the Employee Card shows the Work Panel. The script links the Employee Standee, the Abnormality Containment Cell and its Codex Card to automatically calculate and show the results of the Work performed. The Work Panel in the Employee Card automatically tracks almost all variables related to Work bonus and modifiers, such as Temperance, Work Preference, Work Favor, EGO Gear modifiers and Tokens modifiers. Other Modifiers may still need manual input, such as the Clerk Work Bonus, Ill Pianto della Luna's Performance Work Bonus, etc. If unsure a bonus is applying correctly, the work preview (shown below) provides a source of all bonuses currently affecting the Employee.

STEP 1: Place the *Employee Standee* on top of the *Abnormality Containment Cell*. A message will be displayed in chat telling you that the Employee entered the Containment Cell.

STEP 2: In the *Work Panel*, select the desired *Work Type* that you wish to perform. A private review will be displayed for who selected the *Work Type* showing all variables involved in the *Work* equation, together with the name of the *Employee*, *Abnormality* and the chosen *Work Type*.

STEP 3: To perform the selected *Work*, click on 'Confirm' below. The final result will be displayed in chat globally, showing the *Work Result* and how much *Enkephalin* it generated. This *Enkephalin* is automatically added to the *Codex Card* of the *Abnormality* that *Work* was performed with.

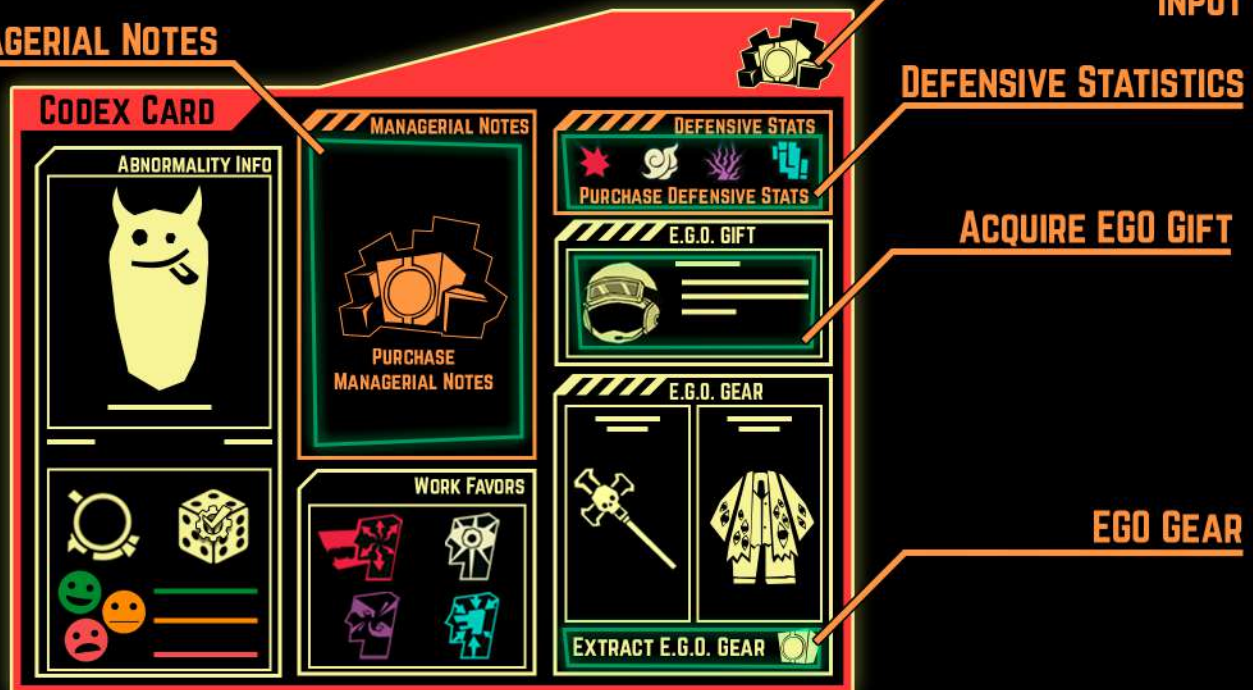

WORK PANEL MESSAGES

CODEX CARDS

Players can interact with their Abnormality Codex Cards in order to automatically buy and extract EGO Gear, Managerial Notes, and Defensive Statistics. This is done by clicking in the indicated regions displayed below. Any purchase made through the Codex Card automatically reduces the Enkephalin stored within it by the appropriate amount. The Codex Card will also limit the max amount of EGO Sets or EGO Gifts you can possess at any one time for you.

MANAGERIAL NOTES

INDICATED REGIONS FOR PURCHASE OR PROCUREMENT ARE IN GREEN

Manual alteration of Enkephalin is possible by left-clicking the center of the Enkephalin box on the top-right of the Codex Card. A special window will appear where you can input positive or negative numbers in order to increase or decrease the Enkephalin by that fixed amount respectively; appropriate for adding Suppression Rewards or resolving manual layer repairs.

NOTE: THE 'WHITE ORDEALS & THE ASPECTS OF AYIN' MODULE EXPANSION HAS A SPECIAL OBJECT THAT, ONCE TOGGLED ON, WILL REDIRECT ANY ENKEPHALIN GAINED THROUGH THE WORK PANEL INTO ITS CUSTOM HEALTHBAR. MORE ABOUT THIS MECHANIC IS WRITTEN IN THE RULEBOOK OF THE MODULE ITSELF.

OTHERS

AUTO-INSANITY

When an Employee's Sanity is reduced to 0, the script will detect and automatically apply the correct Insanity Type Token to that Employee. The script covers cases where an Employee has multiple Stats tied for the highest level and will randomize the Insanity Types accordingly, in addition to any gear or equipment that forces specific Insanity Types as well.

When an Insane Employee's Sanity is recovered to its maximum, curing them, the Insanity Type Token is removed automatically for your convenience. All of these events are appropriately displayed in chat whenever they resolve.

ROOM ANIMATION STATE

You can toggle the animations on Containment Cells through a special object in the Dev Table in the shape of a chess horse (highlighted yellow for your convenience). The Dev Table can be found at the very bottom of the instance. By right-clicking it and looking through it's Context Menu, click on 'Toggle Animation'.

After doing so, it is heavily recommended to save, close the game, and then open it again to not only avoid any errors but to boost performance further by removing the animated objects from memory.

TOKENS AND BULLETS

Tokens automatically update the relevant stats of an Employee when they are applied or stacked, resolving any changes to their main attributes, Health, Sanity, Work Modifiers and/or Tooltips when applicable. A message in chat is also displayed when any Entity receives a Token.

By dropping a HP or SP Bullet in either its Token or Card form onto an Employee, the Employee will automatically gain the appropriate amount of Health or Sanity from that Bullet Effects, in addition to any bonus that may resolve from their currently equipped EGO Gear.

By dropping any type of Shield Bullet onto an Employee, the Employee will automatically receive the Token and create a new 'Shield Durability Bar' below their current Health and Sanity. The colour of the Token will indicate the appropriate Bullet Type, and the Shield Bar and Token both will also remove themselves once completely depleted to 0.
