LOBOTOMY CORPORATION
FACE THE FEAR, MAKE THE FUTURE

- OVERVIEW -

“THINK OF ME AS A MIRROR OF YOU. A SHATTERED MIRROR, TO BE PRECISE.”

Summary

‘White Ordeals & The Aspects of Ayin’ is the first expansion for the Lobotomy Corporation Tabletop Boardgame, designed to be an optional addition to any late-game campaign by providing new unique challenges to push what you’ve learned to the limits, whilst also giving your performance as Managers a unique ending based on your results and skill.

Introducing new content all focused around expanding upon the finale, it aims to incorporate both the narrative and gameplay elements the last days of Lobotomy Corporation notoriously provide.

Revealed during the later phases of the game, a new deck of ‘Narrative Cards’ will be introduced alongside 5 new CoreSuppressions (known as ‘Kether Suppressions’), adding new obstacles to the mix as they are drawn and resolved paired with a retelling of the beloved story, giving more meaning and context to your desperate struggle.

Compatibility

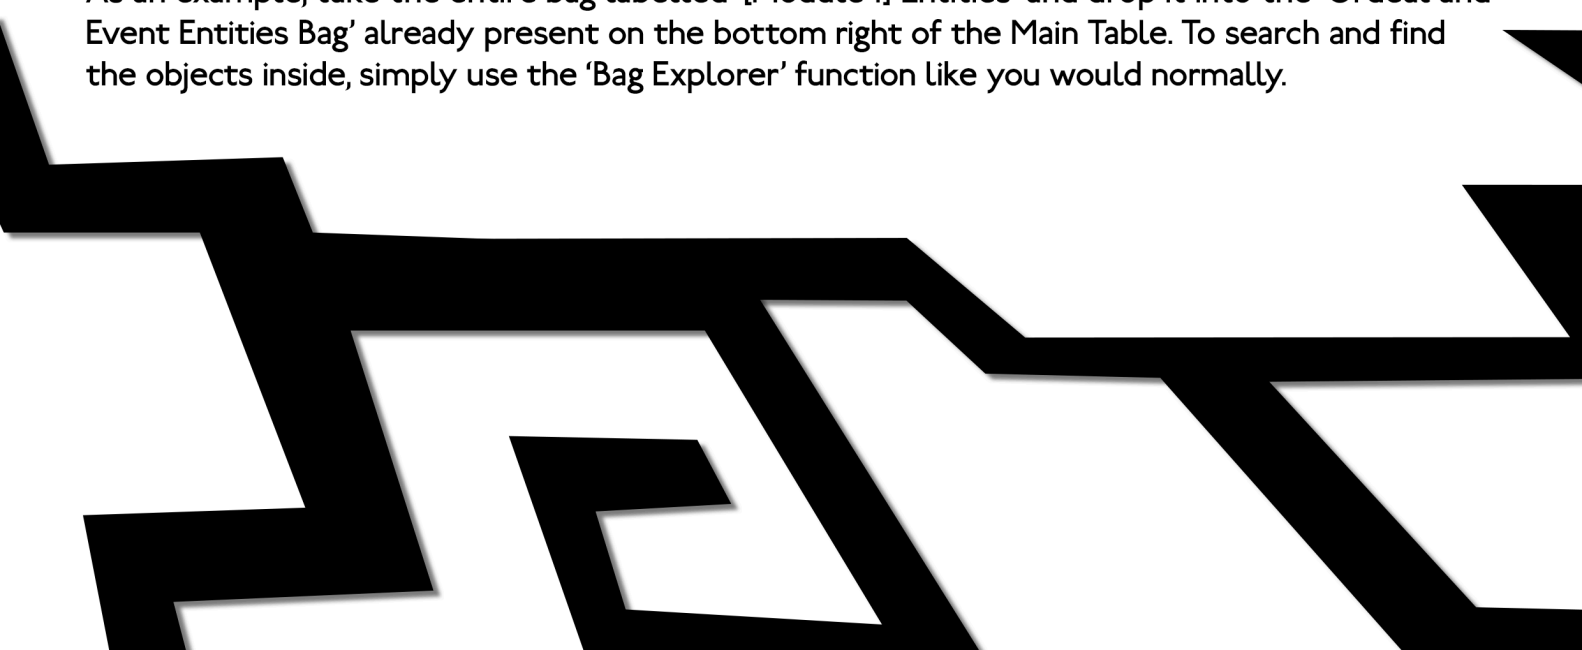

All additions included in this Module begin to show around Cycle 48+, this does not mean however that this expansion cannot be added to a game any earlier for convenience. It can safely be incorporated onto your board at the start of any campaign, midway through a save, or any time later, so long as it does not occur after a Midnight Ordeal has already entered the Facility.

Future Modules will already come built with compatibility for other expansions in mind, and no single Module will ever be necessary to play another unless otherwise specified.

Setup

To add this Module into your game, check the following page. Each of the bags that have been spawned when placing this Module should be dropped into the referenced sections already present on the main board or on the GM’s Table. Other elements will have been placed for you, their location and position shown on a nearby component help card. The rest of the items can either be moved onto the GM’s Table to be hidden or left alone for the time being.

As an example, take the entire bag labelled ‘[Module I] Entities’ and drop it into the ‘Ordeal and Event Entities Bag’ already present on the bottom right of the Main Table. To search and find the objects inside, simply use the ‘Bag Explorer’ function like you would normally.

- MAIN COMPONENTS -

"I, JUST LIKE YOU, DECIDED TO PROCEED. BUT NOTHING CHANGED, TO MY SURPRISE."

5x Kether Suppression Cards

1x Germination Progress Card

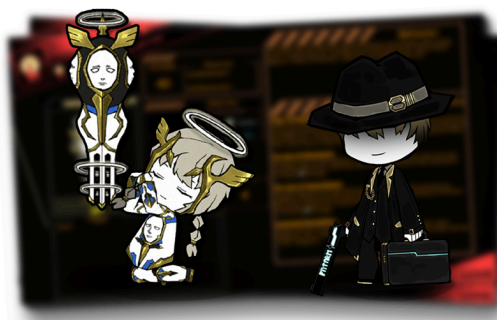

1x Narrative Card Deck
& 4 Ending Card Decks

1x Claw Ability Card Deck

5x New Dossiers & Standees

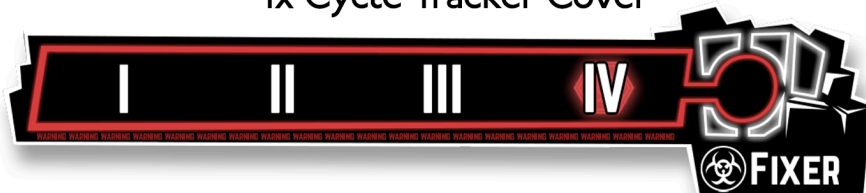

1x Fixer Event Deck

1x Kether Suppression Tracker

1x Cycle Tracker Cover

Where to place Bags/Components:

'[Module I] Tokens' > Token Bag (GM Table)

'[Module I] Entities' > Ordeal and Event Entities Bag (Main Table)

'[Module I] Entity Dossiers' > Entity Dossiers (GM Table)

'[Module I] Kether Core Suppressions' > Anywhere on the GM Table

'[Module I] Defensive Stats' > Entity Defensive Stats (GM Table)

'Fixer Event Deck' > Ordeal Decks & Special Event Cards (GM Table)

All other elements have been placed for you, or will be interacted with and explained later in the Module. Feel free to move these onto the GM Table or leave them in place for now.

- STARTING THE MODULE -

“THE PATH WE WALKED WAS NOT DIFFERENT FROM THAT OF PROMETHEUS.”

Arrival of the Midnight Ordeal

At the start of Cycle 48, an Ordeal of Midnight will enter the Facility. This Entity (or Entities) are labelled as a 'Terminus'. This also applies to any extra Entities spawned by them, their abilities, or other effects associated with the Ordeal. While a Terminus is in the Facility, the game plays as normal until Cycle 56. Playing with this Module, upon completing Cycle 56, the Cycle Tracker swaps to its final state, which represents 4 Cycles infinitely looping and repeating on themselves with standard numbers rather than a continued count.

LOB Phases of these Cycles, referred to as 'Terminus Cycles', no longer reward any LOB regardless of rewards or game state, and Bullets can no longer be gained during the Bullet Focusing phase. All Departments lose their Qliphoth Meltdown immunity during this time, and during each Event Phase only Qliphoth Meltdown cards can be resolved (discarding any other card that gets drawn before pulling another). If the Event Deck ever empties at this point, reshuffle it back together only including Qliphoth Meltdown cards.

CoreSuppressions and Missions can still be attempted at this time, however if they are not completed when all Terminus Entities are suppressed, immediately cancel them and do not gain their associated reward. If 'The Red Mist' and/or 'An Arbiter' are present in the Facility, suppress them and unflip their Suppression Reward card as well, with players losing access to the reward for the rest of the game (though do not lose any extra EGO Gear that was extracted while it were active, for example).

The game can only be considered complete when all Terminus Entities have been suppressed. At the end of that Cycle, discard the 'Bad Ending' card from the top of the Narrative Deck, following the instructions on the card directly underneath it, labelled 'Narrative 1a'.

Overclocked TimeTrack 2 Protocols

After following 'Narrative 1a' to its conclusion, immediately resolve the following in sequence:

- All Managers gain 50 LOB Points each, going to their individual LOB Counters.
- All Managers may focus 4 Bullets of their choice each, and resolve Bullet Focusing Phases as normal from now on (marking the end of all 'Terminus Cycle' effects).
- Managers can vote for one Layer of the Facility to immediately be repaired to full durability.
- All Non-Employee Entities of any Manager's choice can be immediately suppressed, and all Qliphoth Counters can be set to their maximum. (Players do not receive any Suppression Rewards from resolving this effect.)
- Replace the Event Deck entirely with the 'Fixer Event Deck' included in this Module.
- **For all LOB Phases for the rest of the game, players no longer gain any LOB unless otherwise specified.**
- Place the included 'Module 1 Cycle Tracker' element onto the current Cycle Tracker (Page 6)

At this point, Managers and the GM should both take note of all previous Core Suppression Rewards that have been obtained throughout the campaign by using the Scripted Suppression Reward tracker, as this metric will be used to resolve later content. All Core Suppression cards should then be placed aside, unable to be activated by standard means for the rest of the game, though they can still be freely referred to at any point should a refresher on their terminology and rewards be necessary. Then, continue with the next Cycle.

- STARTING THE MODULE CONT. -

“WHAT HAVE WE ACCOMPLISHED, AFTER ALL OF THIS?”

Cycle Tracker

Included in this Module is a card to be placed over the existing Cycle Tracker when resolving the ‘Overclocked TimeTrack 2 Protocols’ effect. Before adding this component, take off any Cycle Complete markers first, but do not delete them, and change the Cycle Tracker to its final state if it was not already there. Place the new cover on top, with there being an existing Snap Point on the tile that should allow it to properly align, before putting the Cycle Complete markers back on the new slots, so your physical position on the Tracker is not lost. Event/Ordeal tokens can be removed permanently.

This new state of the Cycle Tracker represents 4 Cycles that infinitely loop on themselves, resolving all of the exact same phases and events as normal. There are however no additional states to progress onto after each multiple of 4, instead returning back to the first position and removing all Cycle Complete markers.

CoreSuppressions

Once the effects of ‘Overclocked TimeTrack 2 Protocols’ have been resolved, no other Core Suppressions may be attempted unless forcibly invoked by the text on a Narrative Card. Mission progress is also no longer counted at this point, with any incomplete missions being placed back into their respective deck and set aside.

Continue to refer to the list of completed suppressions achieved this campaign which was made earlier when resolving certain Narrative Cards. For further information, refer to Page 9 ‘Kether Core Suppressions’

Work Phase and Enkephalin

Only after following ‘Narrative 2a’ to its conclusion, the Enkephalin step of the Work Phase changes for the rest of the game, and does not revert back to its previous mechanics at any future point.

All Work with Abnormalities may still be performed as normal, however any Enkephalin generated will not be input to an Abnormality’s Codex Card. Instead, by setting the stage on the shared ‘Germination Progress’ bar to the current Kether Core Suppression, Enkephalin from work will automatically enter this element. Enkephalin stored in this way cannot be used to purchase any E.G.O. Equipment, Managerial Notes or Defensive Statistics for any Abnormality. For further information, refer to Page 8 ‘Germinating the Seed of Light’.

Event Phase and the Fixer Deck

An Event Phase still occurs on Cycles marked in RED on the Cycle Tracker. When this Module begins, completely replace the standard Event Card deck with the new one provided. This new deck, consisting of 4 cards, will have additional ‘Fixers’ entering the Facility, and serve as an extra, persistent challenge during the final stages of the game.

Qliphoth Meltdowns of all types, if they do occur, still resolve during this step. Abnormalities, other Entities, and E.G.O. with behaviour tied to Event Cards being drawn treat this step as a trigger for that ability as normal.

- NARRATIVE CARDS -

“WE LOST MUCH MORE THAN WE GAINED, DID WE NOT?”

When this Module is first placed down, several decks of cards will appear at the very top of the Main Board. One of these is the main Narrative Card deck, placed to the furthest left, whilst the others are Ending decks with an appropriate cover over them.

If at any point during the standard campaign the Managers reach a ‘game over’ state where all Employees are either dead or uncontrollable (Insane, Possessed, etc.), immediately flip and reveal the top card of the Narrative Card deck named ‘Bad Ending’. Otherwise, if all ‘Terminus’ entities have been suppressed, discard the ‘Bad Ending’ card and resolve card ‘Narrative 1a’. **At no other point in the game should any of the Narrative/Ending cards or their decks be touched, shuffled, manipulated or further revealed unless directly instructed to do so.**

Once the Module begins, unique events may ask Managers to interact with Narrative Cards. All cards are linked by a number that designates the internal part of the Module they are assigned to, and then a letter for their position within the deck. For example, ‘Narrative 3b’ is part of the 3rd set of cards in the main deck, and is the 2nd card within that set.

When told to discard a Narrative Card, do not reveal, read from, or resolve any of the text on the card. Instead, place it aside or remove it from the game. If instead told to draw and reveal a Narrative Card, flip the next card in the deck and read the text that is now presented face-up, resolving any steps or mechanics when told to do so.

Some Narrative Cards have a ‘Music’ section in the top right corner. These songs can be found already loaded into the music playlist at the top of the screen, and may be played during these story moments if managers wish to do so.

If told to interact with one of the additional ‘Ending Card’ decks, remove the top card that covers it first before proceeding ahead. After finishing with cards that have been revealed, read, and resolved, they may be kept nearby in a separate pile for reference at any time.

- GERMINATING THE SEED OF LIGHT -

“BUT I WANT TO MAKE THINGS RIGHT, NO MATTER THE COST.”

Included in this Module is a ‘Germination Progress’ card that has a Healthbar element inside it.

After following ‘Narrative 2a’ to its conclusion, any Enkephalin generated from Work will not be put into the corresponding Abnormality’s Codex Card. Instead, activating the Healthbar by selecting the appropriate stage beneath it, work will automatically increase the number on the ‘Germination Progress’ bar by that amount. This is a single pool of Enkephalin shared by all Managers, with each player contributing towards its total.

Enkephalin generated from other sources, such as E.G.O. Equipment or Suppression Rewards, will still return the listed amount to the Abnormality’s referenced Codex Card as normal.

Enkephalin stored in the Germination Progress bar **cannot** be used to purchase the following:

- Any E.G.O. Equipment
- Managerial Notes
- Defensive Statistics

Enkephalin stored in the ‘Germination Progress’ bar can, however, be used to recover integrity for any non-Devastated layer in the Facility during the LOB Phase, with the cost of such an action remaining 20 Enkephalin for every point of integrity restored. This option is, however, significantly more risky than it was previously:

Kether CoreSuppressions will require the Managers to store a specific amount of Enkephalin in order to progress the story further. If that goal is reached, but there are other listed criteria on the Core Suppression card that have not yet been met to conclude it (i.e. suppression of a specific entity), any Enkephalin that would go over the goal value (e.g. 1000 Enkephalin) is not added to the total and is immediately lost, unable to be recovered and not diverted into any other element.

When moving between Kether CoreSuppressions, change the stage at the bottom of the Germination Progress bar to reflect the new trial. This will automatically update the maximum amount of Enkephalin it can store for you.

- KETHER CORE SUPPRESSIONS -

"FIND SOLACE IN YOUR MIND OR ELSE YOU WILL NOT ENDURE THIS PLACE."

Kether Core Suppressions have no associated Mission which leads to their unlock and/or activation, and instead can only be triggered via the text on a revealed Narrative Card. These Suppressions should be kept on the GM's table when not active, with each card only being placed on the new Kether Suppression Tracker above the main table when their respective Trial begins.

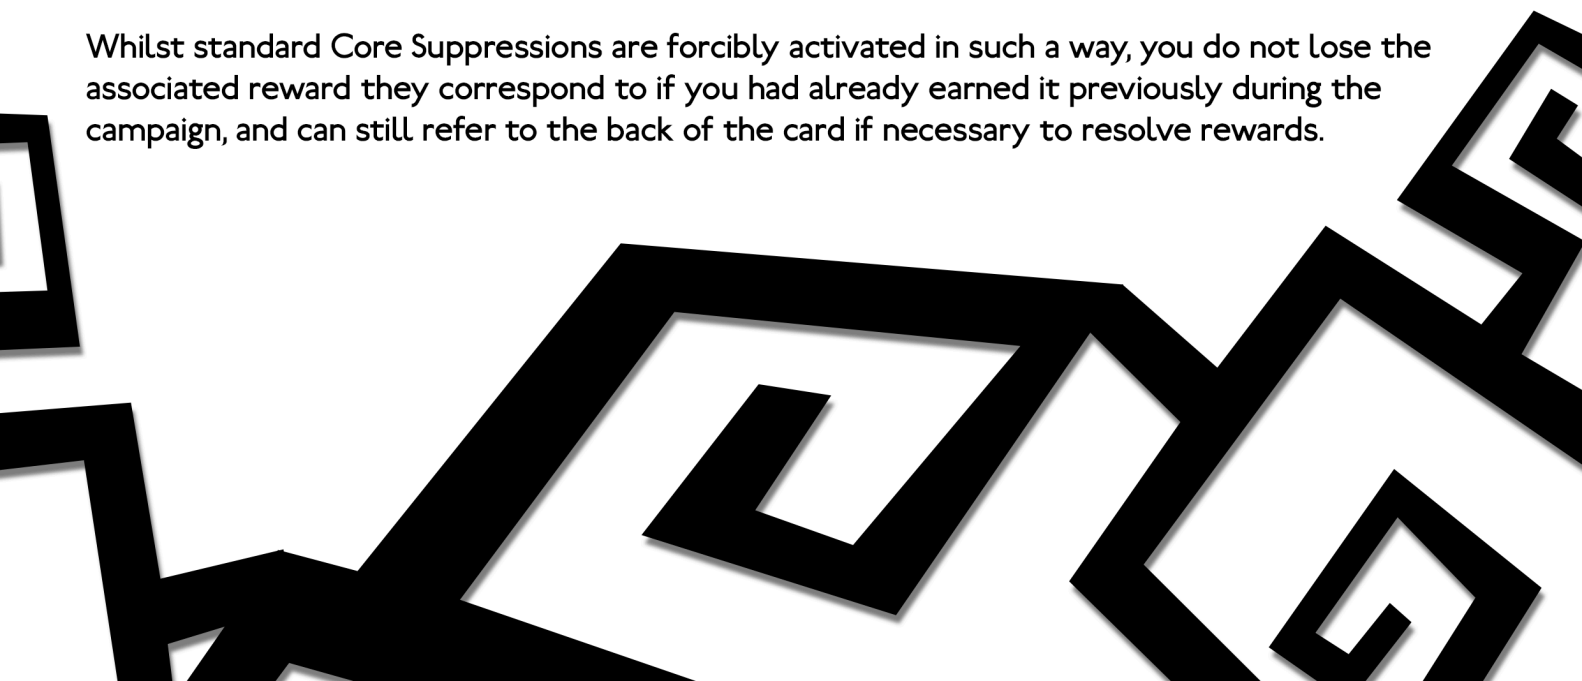

At the end of any Cycle where all of the criteria listed on the card are met, it immediately ends and can be flipped over. Before starting the next Cycle, first draw and resolve the next Narrative Card in the deck and follow it to its conclusion.

All Managers receive a one-time bonus of 16 LOB points at the start of the next LOB Phase after each Trial is complete, which is written on the appropriate Narrative Cards as well.

Certain Kether Suppressions may require previous Core Suppressions from the standard game to be activated in addition to any other effects mentioned on their card, even if the Trial was already beaten during the campaign. When this occurs, place the referenced Core Suppression(s) face up on their respective slot in the standard Core Suppression tracker, and observe the following:

- Ignore any text that references the duration which the Suppression lasts for (e.g. 'For the next 4 Cycles'), treating them as lasting indefinitely until the Kether Suppression that triggered them has concluded.
- For Core Suppressions that have different effects depending on how long they have been active (i.e. Chesed, Hokma), use your position on the Cycle Tracker to resolve their abilities appropriately. For example, if on the second slot out of four of the Cycle Tracker, resolve effects that trigger on 'Cycle 2:' for these Trials.
- Certain Core Suppressions may also have additional effects and changes in this Module, which will be referenced in the relevant Kether Suppression card. These changes are in addition to the standard effects of the Trial unless stated otherwise.

Whilst standard Core Suppressions are forcibly activated in such a way, you do not lose the associated reward they correspond to if you had already earned it previously during the campaign, and can still refer to the back of the card if necessary to resolve rewards.

- ENTITY ABILITY DECKS -

“THE PATH AFTER THIS WILL BE BRUTAL. EXTREMELY BRUTAL.”

This Module introduces a new keyword to Entity Dossiers called ‘Ability Cards’, which is first starting with ‘The Claw’. Ability Cards give Entities far more complex mechanics, behaviours and difficulty than other enemies within their respective risk level.

Entities which have this keyword will always come with an associated Ability Deck (in this Module, the ‘Claw Ability Deck’) which is a series of cards that describe the actions, movements, attacks and/or behaviours that Entity will follow for the Cycle. When the Module was first placed, this element was already shuffled and set up for you in the top right of the Main Table.

When an Entity with behaviours that revolve around ‘Ability Cards’ enters the Facility, immediately draw the top card of their respective deck. The name and text of this card refers to the ‘Ability Card’ behaviour on its Dossier that this Entity will use for that Cycle. At the start of each subsequent Cycle, before resolving any other step, draw a new Ability Card for that Entity and discard the previous one nearby, placing it alongside any others that have already been discarded.

If instructed to draw a card from the Ability Deck when no cards are left remaining, shuffle all of the discarded cards back together first before drawing again. Some Entities may have unique mechanics surrounding this, for example ‘The Claw’ resolves a unique Ability Card action for that Cycle before having its deck shuffled. The specific rules around this interaction will always be explained on both the card itself and in the appropriate Dossier.

Ability Cards may also briefly summarise the action referenced on the Dossier for that Cycle, so Managers have an opportunity to both prepare, strategise, and brace for a devastating attack ahead of time. Do note however, this information is often incomplete and does not include all of the specifics by intentional design, leaving some elements and values ambiguous with full details instead laid out in the GM’s hidden Dossier for them to resolve in full, so don’t forget to still pay attention to the behaviours performed when the Entity activates!

When an Ability Card references no specific, unique mechanics or behaviours during certain phases, or simply instructs the Entity to behave ‘as normal’ or ‘normally’ for a time, resolve only the default movements and basic attacks listed on their Dossier instead. For example, if the mechanics on an Ability Card only begin to take effect during the 2nd Movement and Combat Phases, during the 1st of both the Entity will still resolve its standard attacks, movement, and target priority unless otherwise specified.

Once the Entity has been suppressed, discard all of their associated Ability Cards and place them aside. You no longer need to draw a new card each Cycle, so long as they stay defeated...

- FAQs -

**"I HAVE ALREADY SEEN THE WORLD AHEAD OF YOU. THE TIME YOU HAVE YET TO SEE."
"NOTHING CHANGES."**

Q: After the Kether Suppression 'Proving Oneself', do you still spawn Fixers at each Event Phase and/or draw cards from the new Event Deck?

A: Yes, once the trials of 'Proving Oneself' have begun, the step of drawing a Fixer Event Card and placing them in the Facility lasts for the rest of the game.

Q: When I suppress an Abnormality while the effects associated with 'Germination Progress' are active, where does the Enkephalin from the suppression reward go?

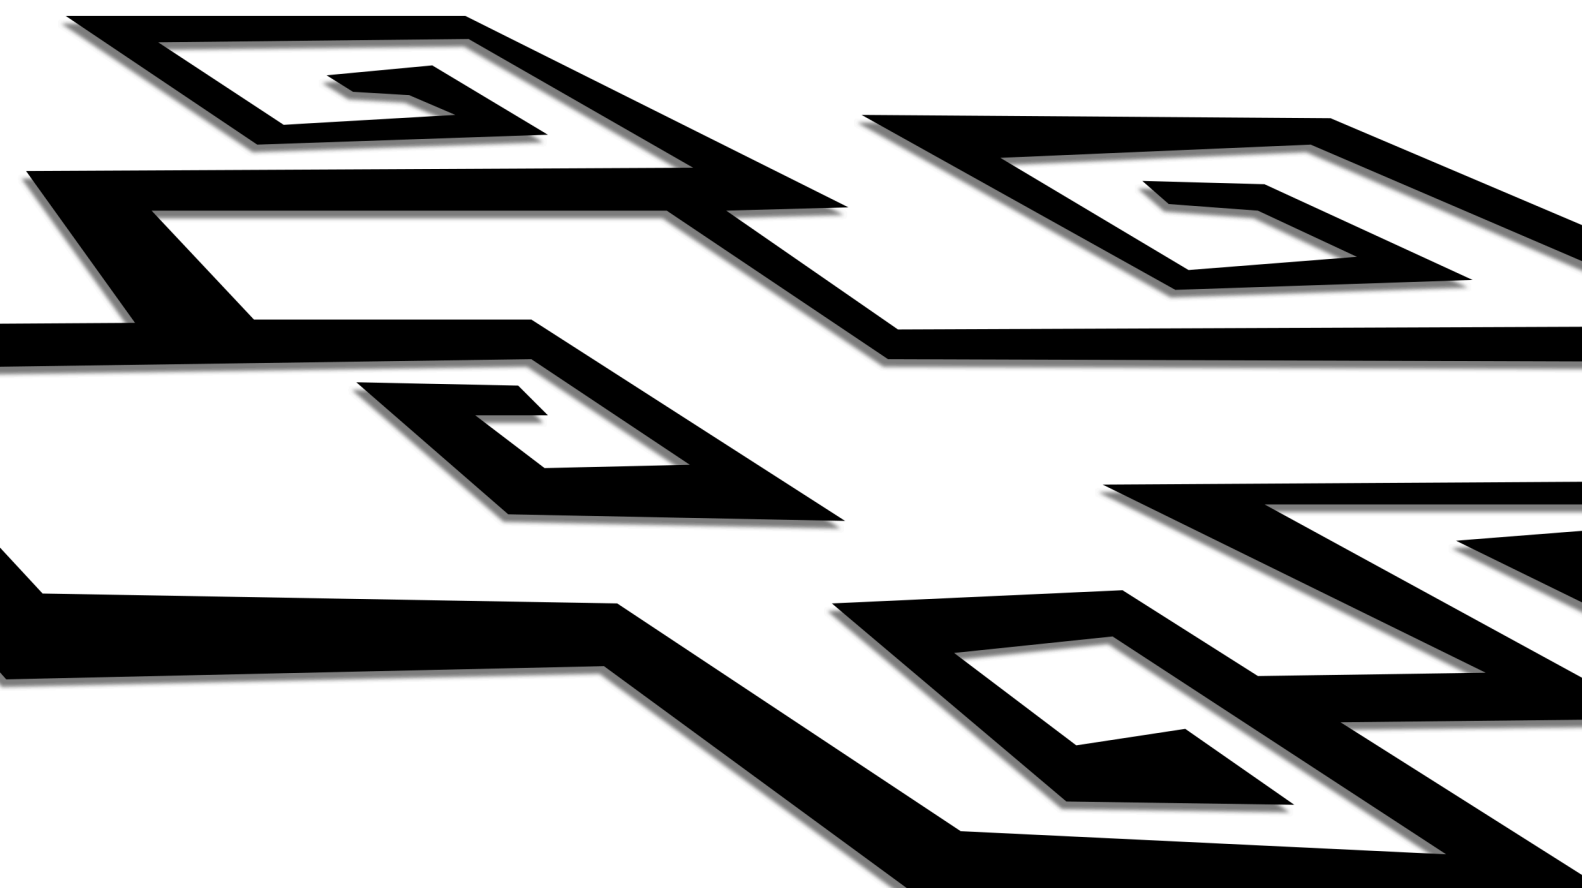

A: The Enkephalin generated from suppressing an Abnormality goes to the Abnormality's Codex Card, not to the global 'Germination Progress' pool shared by Managers.

Q: Can I still spend Enkephalin from an Abnormality's Codex Card to purchase things, or to repair integrity within a Layer, while the effects associated with 'Germination Progress' are active?

A: While the effects of 'Germination Progress' are active, integrity can be repaired in both ways; Either from spending 20 Enkephalin from an Abnormality Codex Card (this can only target the layer the Abnormality is in), or spending 20 Enkephalin from the 'Germination Progress' bar (which can target any layer). In addition, Enkephalin can still be spent from a Codex Card to buy E.G.O and other items as normal if there is still a sufficient amount remaining.

Q: When a special Entity resolves their Ability Card actions during any Phase, do they still also resolve any basic movement and attacks as well?

A: No, the actions on Ability Cards replace all standard behaviour for the referenced phase. For example, a unique Ability Card action that occurs in the 2nd Combat Phase stops the Entity from performing its basic attack that phase too (unless otherwise specified).
